

Balanced Scorecard – Overview

Purpose:

The *Balanced Scorecard (BSC)* is a strategic performance management tool that translates a company's strategic plan into actionable objectives and measurable performance indicators. It helps ensure that daily operations align with long-term goals.

Background

- Developed by **Dr. Robert Kaplan** and **Dr. David Norton** (Harvard Business Review, 1992).
 - Originally created to overcome the limitations of relying solely on **financial performance** to evaluate managers.
 - It has evolved from a **performance measurement system** into a **strategic management framework**.
-

Key Idea

Managers often focus too heavily on **short-term financial results** (e.g., quarterly profits). This can harm **long-term success**, such as by cutting costs in ways that reduce quality and customer satisfaction.

The Balanced Scorecard addresses this by combining:

- **Financial measures** (lagging indicators of past performance)
 - **Non-financial measures** (leading indicators of future success)
-

Main Benefits

1. Links **strategy to operations** — turns strategic plans into day-to-day “marching orders.”
 2. Promotes **goal congruence** — aligns division and individual objectives with corporate goals.
 3. Balances **short-term and long-term** performance evaluation.
 4. Encourages focus on **future growth and sustainability**, not just immediate profits.
-

Financial vs. Non-Financial Measures

Type	Description	Indicator Type	Examples
Financial	Measures results of past actions	Lagging	ROI, revenue growth, profit margin
Non-Financial	Measures activities that drive future results	Leading	Customer satisfaction, quality improvements, innovation rates

Strategic Linkage

- Each organization develops its own **unique scorecard** based on its **vision, mission, and strategy**.
- Divisional and individual scorecards must align with the **overall corporate strategy**.
- Promotes organization-wide alignment and cooperation toward common objectives.

Balanced Scorecard – Four Perspectives

The **Balanced Scorecard (BSC)** translates a company's **vision and strategy** into a set of performance objectives and measures, viewed from **four interrelated perspectives**.

These perspectives are **hierarchical**, meaning:

Learning & Growth → Internal Processes → Customer → Financial

Each lower-level perspective drives success in the one above it.

1. Financial Perspective

Focus: How do we look to our shareholders?

Objective: Measure financial success and create shareholder value.

Typical Metrics:

- Operating income / Net profit
- Revenue growth (especially from new products)
- Gross margin %
- Cost reduction percentages
- Residual Income (RI)
- Return on Investment (ROI)

Key Point:

Financial performance is critical, but **long-term financial success** depends on achieving goals in the other perspectives (customer, internal process, learning & growth).

2. Customer Perspective

Focus: How do customers see us?

Objective: Measure success in target market segments and customer satisfaction.

Typical Metrics:

- Market share and market growth in target segments
- Customer satisfaction index / survey scores
- Number of repeat customers
- On-time delivery %
- Product return rate / defect rate
- Product reliability and service quality

Examples of Strategic Goals:

- Become the **lowest-cost supplier** → measured by total cost to customer
 - Be known for **high quality** → measured by product defects or reliability
 - **Superior service** → measured by response time and post-sale service quality
-

3. Internal Process Perspective

Focus: What must we excel at internally?

Objective: Identify and measure the internal operations and innovations that create value for customers.

Typical Metrics:

- Production efficiency (e.g., unit cost, cycle time, plant utilization)
- Number of new product introductions (innovation)
- Percentage of processes using advanced controls (technology level)
- Employee service efficiency (e.g., time to resolve customer inquiries)

Example Links:

- To be the *lowest-cost supplier* → need efficient, low-cost production.
 - To achieve *high quality* → need strong internal manufacturing and quality control processes.
 - To *meet customer needs better than competitors* → need innovation and effective service systems.
-

4. Organizational Capacity / Learning and Growth Perspective

Focus: How can we continue to improve and create value?

Objective: Build the foundation (people, systems, and culture) needed for long-term success.

Components:

- **Human Capital** – Employee skills, training, and knowledge
- **Information Capital** – Systems, databases, and technology infrastructure
- **Organizational Capital** – Culture, leadership, teamwork, and knowledge sharing

Key Idea:

Strong learning and organizational capacity support effective internal processes, which in turn enhance customer satisfaction and lead to better financial performance.

Vision and Strategy

Critical Success Factors (CSFs) and Key Performance Indicators (KPIs)

1. Purpose and Link to the Balanced Scorecard

- The **Balanced Scorecard (BSC)** translates strategy into measurable objectives.
 - To do this effectively, organizations must identify **Critical Success Factors (CSFs)** and track them using **Key Performance Indicators (KPIs)**.
 - **CSFs** → what must be done well.
 - **KPIs** → how success in those areas is measured.
-

2. Critical Success Factors (CSFs)

Definition:

Specific activities or areas that are **vital for achieving organizational goals and maintaining competitive advantage**.

Key points:

- CSFs directly affect efficiency, effectiveness, and long-term viability.
- They vary by industry, company, and strategy.
- Only a **few** CSFs should be chosen — the ones most essential to strategic success.

Example:

In an industry with **rapid technological change**, **Research and Development (R&D)** is a **critical success factor**.

3. Key Performance Indicators (KPIs)

Definition:

Quantifiable measures that evaluate how effectively the organization is performing in its **critical success factors**.

Purpose:

- Track progress on strategic priorities.
- Provide focus for management attention and performance improvement.
- Serve as the measurement foundation of each **Balanced Scorecard perspective**.

Examples (based on strategy):

Strategy Focus	CSF	Typical KPI
Customer Service Excellence	Fast, helpful support	Average telephone wait time, % of issues resolved on first contact
Product Leadership	R&D innovation	Number of new product launches, % of revenue from new products
Operational Efficiency	Cost control	Unit cost, production cycle time, % of waste reduction
Quality Leadership	Product reliability	Defect rate, warranty claims, customer satisfaction score

4. Example: Customer Service–Driven Organization

A 3D printing services company relies on excellent customer service:

- **CSFs:**
 - Skilled, knowledgeable customer service personnel
 - Fast response time (minimal wait time)
 - Access to accurate technical information
 - **KPIs:**
 - Average customer wait time on calls
 - Customer satisfaction rating
 - % of service reps trained on new technology
 - System uptime for customer information database
-

5. Key Takeaways

- CSFs = *what must be done well to succeed*
- KPIs = *how performance is measured in those areas*
- Both must be **aligned with strategy** and **few in number** (focus on quality, not quantity).
- Together, they make the **Balanced Scorecard actionable and strategy-driven**.

Strategy Map – Overview

A **Strategy Map** visually shows how an organization's **strategic objectives** in the four Balanced Scorecard perspectives are **linked together in cause-and-effect relationships**.

It translates **vision and strategy** into specific, interconnected goals.

1. Purpose of a Strategy Map

- To show **how value is created** within the organization.
 - To make it clear **how improvements in one area** (e.g., employee training) lead to success in another (e.g., financial performance).
 - To help **employees understand** how their day-to-day work contributes to corporate strategy.
-

2. Cause-and-Effect Flow (Top–Down Linkage)

The four perspectives are **linked hierarchically**, starting from the bottom:

Perspective	Role in the Strategy Map	Example Relationship
Organizational Capacity / Learning & Growth	Provides the foundation — develops people, systems, and culture.	Training employees and improving IT systems → Faster internal processes
Internal Process	Uses capabilities to improve operations and innovation.	Automation and process improvements → Quicker order turnaround

Perspective	Role in the Strategy Map	Example Relationship
Customer	Delivers improved value to customers.	Faster service and reliable quality → More customer satisfaction and loyalty
Financial	Achieves ultimate business outcomes.	More satisfied customers → Increased sales revenue and profitability

Flow Summary:

Learning & Growth → Internal Process → Customer → Financial

3. Leading and Lagging Indicators

- **Non-financial measures** (Learning & Growth, Internal Process, Customer) are **leading indicators** — they predict future performance.
- **Financial measures** are **lagging indicators** — they show the results of past performance.

4. Example: 3D Printing Company Strategy Map

Perspective	Strategic Objectives / Critical Success Factors
Financial	• Increase sales revenue by entering the online market. • Increase profitability by reducing variable costs.
Customer	• Increase number of customers through online marketing partnerships. • Increase sales volume by speeding up the quotation process.
Internal Process	• Improve order turnaround time by purchasing new, faster equipment.
Organizational Capacity / Learning & Growth	• Decrease order processing time by introducing an automated order system and training employees to use it.

Cause-and-Effect Chain:

Training & Automation (Learning & Growth) → Faster Order Processing (Internal Process) → Faster Quotes & More Customers (Customer) → Higher Sales & Profit (Financial)

5. Key Takeaways

- A **strategy map links all perspectives** of the Balanced Scorecard in a logical, strategic sequence.
- It ensures **alignment** between operational actions and strategic financial goals.
- It converts abstract strategy into a **visual, easy-to-understand roadmap** for the entire organization.

Implementing a Balanced Scorecard (BSC)

1. Importance of Organization-Wide Support

Successful implementation of a **Balanced Scorecard** depends on:

- **Organization-wide awareness and commitment.**
- **Effective communication** of its purpose, structure, and benefits.

- **Strong leadership support** from top management and the **board of directors**.

The BSC must be presented as a system that links *actions* → *performance* → *strategy* → *long-term goals* through cause-and-effect relationships.

2. Role of Top Management and the Board

- **Senior management** must **sponsor and champion** the program.
 - The **board of directors** can have its own scorecard goals to reinforce strategic alignment and support from the top.
 - Visible top-level commitment helps the program gain credibility across all levels of the organization.
-

3. Involvement of Divisions and Business Units

- Each **business unit/division** develops its own **customized scorecard** based on corporate objectives.
 - This builds **ownership and motivation** among managers and staff.
 - **Senior management review** ensures that all divisional scorecards are **aligned** with the company's overall strategic goals.
-

4. Structure of the Scorecard Report

A good BSC report should:

- Be organized by the **four perspectives**:
 1. Financial
 2. Customer
 3. Internal Process
 4. Organizational Capacity / Learning & Growth
 - Include:
 - **Target values** (planned performance)
 - **Actual results** (achieved performance)
 - **Indicators** for variances (e.g., color-coded for favorable/unfavorable)
 - Assign **responsibility**:
 - Each manager = accountable for specific performance lines.
 - Division head = accountable for the entire division's results.
 - Identify **potential trade-offs**, such as:
 - Reducing R&D to boost short-term profits, which could hurt long-term performance.
 - Declines in R&D or quality metrics would act as early warning signals.
-

5. Communication and Internal Marketing

The BSC must be “**marketed**” **internally** to build enthusiasm and participation. Communication should occur through **print, verbal, and electronic channels**.

a) Print / Electronic Communication

- **Brochures and newsletters:** Explain benefits, share results, and celebrate success stories.
- **Intranet postings:** Display overall progress and link results to corporate goals.
- **Highlight both successes and challenges** to show transparency and accountability.

b) Verbal Communication

- **Regular meetings:** Management reviews scorecard results and invites employee feedback.
- **One-on-one discussions:** Supervisors engage employees closest to the work for practical insights.
- **Suggestion systems and training programs:** Encourage employee participation and improvement ideas.

Managers must **listen, respond, and reward** useful employee suggestions to maintain engagement and credibility.

6. Technology and Accessibility

- Post **BSC results** on the company **intranet** with appropriate access levels:
 - General summaries for all employees.
 - **Detailed data** (via password) for senior managers’ decision-making.
-

7. Linking BSC to Compensation

- Tie **bonuses and incentives** to **goal achievement** under the Balanced Scorecard framework.
 - Aligns employee behavior and motivation with strategic objectives.
 - Reinforces the principle of **goal congruence** across all levels.
-

8. Key Takeaways

Implementation Element	Purpose / Benefit
Top management support	Ensures credibility and commitment
Division involvement	Builds ownership and alignment
Clear reporting	Enables accountability and early detection of trade-offs
Continuous communication	Promotes understanding and motivation
Employee engagement	Encourages improvement and innovation
Technology integration	Improves visibility and accessibility
Incentive alignment	Strengthens goal congruence and performance focus

Balanced Scorecard Reporting – Summary

1. Purpose

Balanced scorecard reporting helps management monitor **both financial and non-financial performance measures**, linking daily operations to strategic goals.

Software can help track these metrics — but **software alone does not implement** a balanced scorecard. The company must first **develop its own scorecard**, implement it, and review results regularly.

2. Example of a Balanced Scorecard Report

Perspective	Critical Success Factor	KPI (Measure)	Target	Result	Initiative	Interpretation
Financial	Increase sales revenue	Rate of sales growth	+20%	+25%	Enter international market	Target surpassed
	Increase profitability	Gross profit margin	45%	41%	Decrease variable costs	Slight improvement, below target
Customer	Increase number of customers	% increase in customers	+10%	+20%	Change marketing service	Target surpassed
	Increase sales volume	% increase in sales	+5%	+10%	Increase speed of quotes	Target surpassed
Internal Process	Improve turnaround time	Avg. picking/shipping time	−30 min	−35 min	Purchase new equipment	Target surpassed
Learning & Growth	Decrease order processing time	Avg. processing time	−20 min	−27 min	Automate order processing + training	Target surpassed

3. Interpretation of Results

- **Financial:** Sales growth target exceeded; profitability slightly below goal.
- **Customer:** Significant increase in both customers and sales.
- **Internal Process:** Faster order fulfillment achieved.
- **Learning & Growth:** Automation and training improved processing time beyond target.

4. Benefits

- Encourages **focus on long-term success**, not just short-term profits.
- Rewards managers for improving **key non-financial drivers** (like efficiency, training, or innovation).
- Strengthens the **link between strategy and action**.

5. Limitations

- **Difficult to compare** across divisions (each has a unique scorecard).
- Requires **strong data systems (ERP)** to track diverse metrics.

- **Non-financial data** may lack audit reliability.
 - **Weak cause-effect links** can cause failure (e.g., non-financial targets met, but profits don't rise).
 - If used for control rather than learning, employees may **"game the numbers"** without true engagement.
-

✅ **Conclusion:**

When designed carefully and monitored continuously, the **Balanced Scorecard** provides a **comprehensive framework** for translating an organization's strategy into measurable actions and outcomes.

Customer and Product Profitability Analysis — Summary Notes

1. Purpose

To identify which **customers** and **products** are profitable and which are not — so the company can:

- Focus resources on profitable ones.
- Improve or drop unprofitable ones.

💡 **80–20 Rule (Pareto Principle):**

- 80% of profits come from 20% of customers.
- 20% of customers are often **unprofitable**.

A small number of causes (20%) often lead to a large portion of effects (80%).

This can be applied to:

- **Business:** 80% of profits come from 20% of customers.
- **Sales:** 80% of revenue comes from 20% of products.
- **Time Management:** 80% of results come from 20% of tasks.
- **Quality Control:** 80% of defects come from 20% of problems.

📊 **Practical Applications**

Area	80/20 Insight
Customer Profitability	Focus on the top 20% of customers who drive most profits.
Inventory Management	Prioritize the 20% of items that generate 80% of sales.
Productivity	Identify the 20% of tasks that yield 80% of results.
Problem Solving	Fix the 20% of issues causing 80% of complaints.

📊 **Pareto Analysis & Chart**

- A **Pareto Chart** is a bar graph that ranks causes by frequency or impact.
 - Helps visualize which few factors deserve the most attention.
 - Common in Six Sigma and Lean methodologies.
-

2. Customer Profitability Analysis (CPA)

Definition:

A process that measures the **profitability of individual customers or customer groups** by comparing **revenues earned** and **costs to serve**.

Uses:

- Identify **high-cost-to-serve** customers → reprice or reduce services.
- Identify **low-cost-to-serve** customers → offer discounts to increase sales.
- Strengthen relationships with **most profitable customers** through better service.
- **Targeted marketing:** focus marketing efforts on profitable customer segments.

Example: Bank Account Analysis

- Bank tracks each business customer's:
 - Average loan balances
 - Interest income
 - Cost of funds
 - Fees for services (cash management, lockbox, etc.)
 - The **account analysis report**:
 - Calculates total service costs.
 - Gives a credit for deposits kept on account.
 - Determines the net fee to charge the customer.
 - Customers can reduce fees by keeping higher non-interest-bearing deposits.
-

3. Product Profitability Analysis (PPA)**Definition:**

Determines which **products or services** are profitable and which are not.

Purpose:

- Identify unprofitable products → **re-price** or **discontinue**.
 - Replace with **higher-margin** or **more popular** products.
 - Use **Activity-Based Costing (ABC)** to accurately assign indirect costs.
-

4. Importance of Accurate Cost Allocation

- Shared/common costs must be properly allocated.
 - **ABC** helps assign costs based on actual resource use.
 - Wrong allocations can make good customers/products look bad (or vice versa).
-

5. Decision-Making: Relevant vs. Irrelevant Costs

Concept	Meaning	Relevance
Relevant Costs	Future costs that differ between alternatives	✓ Include
Irrelevant Costs	Costs that do not change between alternatives	✗ Exclude
Sunk Costs	Past costs that cannot be changed	✗ Irrelevant
Avoidable Costs	Costs that can be eliminated if activity stops	✓ Relevant
Unavoidable Costs	Costs that continue regardless of decision	✗ Irrelevant

6. Examples

- **Avoidable Costs:** Direct labor, materials, variable overhead related to a specific product or customer.
 - **Unavoidable Costs:** Factory rent, allocated admin salaries, depreciation on idle equipment with no alternative use.
-

7. Key Decision Rule

Drop a customer or product **only** if the **avoidable costs exceed** the **lost revenue**.

If dropping them **saves less cost than the revenue lost**, keep them.

8. Division-Level Decision

When evaluating whether to close an entire **division**, only include **relevant revenues and costs** — i.e., those that would change if the division closed.

9. Managerial Focus

Managers must always ask:

“What difference will this decision make?”

“Which costs and revenues will change as a result?”

✓ Summary Conclusion:

Customer and Product Profitability Analysis helps businesses:

- **Focus on profitable segments**
- **Improve pricing and service strategies**
- **Make rational drop/keep decisions** based on **relevant and avoidable costs**, not arbitrary allocations or sunk costs.
